

USING THE RULES

The following pages contain all of the army rules, detachments and datasheets you will need to field your Orks as a brutal fighting force on the tabletop.

Listen 'ere, you lot! To use your Orks in a battle of Warhammer 40,000, you'll need to gather them into a riotous warband and decide how you want your army to fight. You can choose which units and **detachments** you will use, making your army unique. The rules for mustering your army can be found in Warhammer 40,000: The App, along with points values for your units and **enhancements**, and Detachment Points (DP) values for your **detachments**. These values may change over time to maintain the best gaming experience.

CHOOSE YOUR UNITS

The datasheets in this book (pg 138-175) describe all the units you can select from when raising your warband. The battle sizes listed in the Muster Armies rules will tell you how many points you can spend on units.

CHOOSE YOUR DETACHMENTS

Detachments (pg 122-137) are selected while mustering your army. They contain characterful rules to theme the way your models fight, such as:

- **Detachment Rules:** These evoke the narrative themes of your force, from the high-octane antics of a Kult of Speed to the no-nonsense brutality of Bully Boyz.
- **Enhancements:** These are chosen while mustering your army, and give powerful boosts to key units, whether as a particularly killy choppa, extra armour bolted on, or a rare gleam of intelligence. Unless labelled 'Upgrade', each one can only be taken once per army.
- **Stratagems:** Using these during your battles triggers a range of effects to give you a tactical edge. They might send aircraft hurtling from the sky into the midst of your foes, yank your overeager forces back from a doomed scrap, or make sure that if they do go down, they at least go down fightin'.

The **detachments** you select can affect the mission you play. Where this is the case, it is described in the mission rules and in the Warhammer 40,000 app.

START THE BATTLE

Once you and an opponent have mustered armies, it's time for battle. This is when your **army rules** (pg 120-121) kick in. All Orks have the **Waaagh! army rule**, helping them flood across the battlefield and get stuck in. Other rules common to several of your units are listed here too (check your units' datasheets to see which of these they can use).

USING DATASHEETS

The Core Rules (section 02) explain how to use datasheets, but there are additional rules described here.

LEADER AND SUPPORT

Some units have the **Leader** or **Support** abilities. These units can form **attached** units (Core Rules, 19.01). **Leader** and **support** units can only lead specific **bodyguard** units, as listed in the Warhammer 40,000 app.

MORE THAN ONE WEAPON PROFILE

Some weapons have more than one profile – when your model attacks with that weapon, you choose which profile to use, as explained on the datasheet. **Hunter** profiles, as shown here, can only target units with a keyword listed in that profile.

MELEE WEAPONS	RA
Choppa - Standard	M
HUNTER: MONSTER/VEHICLE	M
Choppa - Hunter	M

WARGEAR ABILITIES

Some units can have **wargear abilities**, which are marked with a cog symbol (see right). These only apply while a model in that unit is equipped with the item of wargear of the same name.

DAMAGED

Some units become less effective as they sustain damage in battle. These units have the **Damaged X** core ability (App Core Rules, 24.39), where **X** is the number of wounds remaining. This is also shown on their profile (see right).

KEYWORDS

As well as the keywords listed in each datasheet's Keywords section, each datasheet name acts as an additional keyword for that unit.
